

Cavite Navigator is a travel blog website that aims to showcase the features of the province of Cavite.

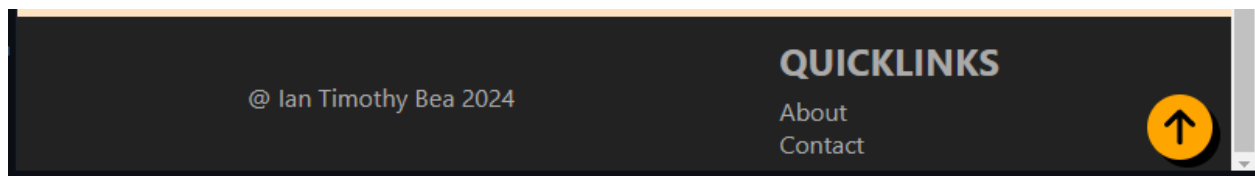

The website at the making is a simple showcase of basic html and css features such as :hover pseudoelements and media queries.

The website only has three functional pages: **homepage**, **about**, and **contact**.

They can be accessed through the **header**:

and **footer**:

How to run:

Simply click on any of the html files to start browsing:

Name	Date modified
 index	24/12/2024 7:38 p
 about	24/12/2024 8:18 p
 contact	24/12/2024 7:57 p

Or open the github pages link on a browser:
